

- **Lower cost** – \$1.1 billion vs. higher costs of other competitors
- **Minimal environmental impacts** – adjacent to existing HVDC ROW and upgrades in existing ROW and reusing infrastructure
- **Experienced team** – only company to have built and operated an HVDC line in New England with more than 30 years experience
- **Real environmental benefit** – new Class I wind generation with significant GHG reductions (nearly 16 million tons reduced over ten years vs. just 3.5 million tons for NPT)
- **Growing local & regional support** – including state legislators, labor unions, economic development organizations, project route towns, Board of Selectmen members, businesses, etc.
